

DV-60 Universal DVD player

High performance range that builds on the success elements of the Esoteric® DV-50

The latest technology and brushed up quality - the newest member of highly acclaimed Esoteric® “DV” series

The Esoteric® DV-60 universal DVD player is a high performance range of Esoteric® audiophile products, which builds on the success elements of the DV-50. The DV-60 shares the basic functions with DV-50, i.e. high quality analog audio output backed up by the high-precision 24-bit D / A converter, unique up-conversion functionalities, and mulch-channel analog audio output terminals to support the mulch-channel contents of SA-CD and DVD-Audio / Video. Combined with these well-established popular elements, the DV-60 newly features the following up-dated technologies;

- Esoteric® proprietary drive mechanism (with high rigid metal stabilizer for superior anti- vibration / resonance property)
- The latest D / A converter (with “FIR / RDOT + FIR” style digital filter algorithm, signal up-conversion technologies, and new PCM to DSD signal conversion)
- The up-graded video processing technologies (ADV7324 with NSV technology from Analog Devices, and Faroudja I/P conversion processor chip with DCDi technology)
- The latest video output terminals (including HDMI terminal with maximum 1080p scaling - the latest LSI chip ABT1018 from Anchor Bay Technologies)
- Word synchronization function (Word input BNC terminal x 1)
- Highly evolved home installation solutions with many external control functions (RS232C, 12V DC trigger, and remote-in terminals)
- High rigid chassis construction with elegant cut aluminum top / side panel (exquisitely engraved “ESOTERIC” logo on the top panel)
- The slim remote with illumination keys for easier operation in home theatre environments

The Esoteric® DV-60 incorporates truly latest, unique and proud technologies combined with the brushed-up quality, which has to offer the stunning performance to the demanding audio / videophiles!

▽ Key features

*Playable disc format : CD/SACD/DVD-V/DVD-A/VCD/SVCD

***Analog audio output** terminals : 2ch RCA output / **mulch-ch. RCA output**

*Digital audio output terminals: COAXIAL/TOS (Signal format variation: "Stream" or "PCM" can be selected by the SETUP mode operation)

*Video output : composite / S terminal / component terminals / D terminals /HDMI (including audio signal)

***Up-conversion function**

• FIR : 8 x

$F_s=44/48\text{Hz} \quad x 8 = 24\text{bit } 8x (=352/384\text{Hz})$

$F_s=88/96\text{Hz} \quad x 8 = 24\text{bit } 16x (=704/768\text{Hz})$

$F_s=176/192\text{Hz} \quad x 8 = 24\text{bit } 32x (=1408/1536\text{Hz})$

• RDOT+FIR (24bit 32x)

• DSD (1bit 64x)

※ SA-CD DSD signals are directly output without up-conversion.

※ Digital signals are output in its original F_s .

***HDMI output terminal**

Video scaling function : 480p/720p/1080i/1080p

Audio output : Stream signal output / 2ch PCM (DOWNMIX) signal output /Mulch-ch. PCM signal output

※ HDMI terminal does not output DSD signal.

***Word sync Input**

***RS232C Remote control (wz Standby/ON)**
